

Ixia (Nasdaq: **XXIA**) is a profitable, growing California-based developer of network performance analysis hardware and software for next generation converged networks.

Ixia's highly scalable solutions generate, capture, characterize and emulate network and application traffic, establishing definitive performance and conformance metrics of the network device or system under test.

Ixia encourages and sponsors research in the following fields:

- **TCP/IP networking** – stack optimization, protocol implementation
- **Operating systems** – kernel optimization, scalability improvements

This year, we would like to offer grants and technical support to select students in the 5th year for their graduation thesis. If you are such a student, and your research interests are in these areas, please submit your CV to: **Octavian Purdila**, opurdila@ixiacom.com, no later than Nov 14, 2005. You will be notified by email on the status of you application. Good luck!

Requirements

- Students in the 5th year preparing the graduation thesis
- Networking knowledge – TCP/IP
- Linux programming – kernel, user-space
- Programming knowledge in C/C++

If you want to be part of an enthusiastic, fast growing international top-gun team join us in one of the hottest high-tech product companies in Bucharest. Members of the Ixia team experience the challenges and rewards of a career in a fast-paced, leading-edge work environment.
